

ABSTRACT OF THE DISCLOSURE

A7
Adhesive tape comprising a support which is woven from a plurality of threads formed at least in the majority of ethylene polyterephthalate. At least some of the plurality comprise longitudinal threads extending in a longitudinal direction of the adhesive tape. At least some of the plurality comprise transverse threads extending transversely relative to the longitudinal direction. A layer of adhesive covers at least one face of the support. A titre of the longitudinal threads per unit width of the adhesive tape is lower than a titre of the transverse threads per unit length of the adhesive tape and at least equal to 2500 dtex/cm. The longitudinal threads are held in place in the transverse direction by the adhesive, so as to give to the adhesive tape a transverse tearing stress of less than 10 N.4v
